## Reef Balls

author [andrewprice](#)

Coral reefs, they say, are the rainforests of the ocean. They're important linchpins of the ecosystem, they're delicate, and they take *forever* to make.

Unless, of course, you just press them up in a factory. Reef balls—concrete structures that support coral growth and provide habitats for all sorts of underwater life—seem to be working pretty well. Here's a [Wall Street Journal story](#) and here's the [Reef Ball Foundation](#).
